## ABSTRACT(SUMMARY)

The project is about a food delivery app. It is different from other food delivering apps such as swiggy and zomato because this is a homemade food delivering app.

The main concern nowadays is that people are going for fast food and unhealthy foods, in order to find a solution to this we came up with a concept of homemade food delivering app. The food delivered through this app is both pocket friendly and healthy. In this there will 4 main members

- Administrator
   Customer
   Chef(Homemakers)
   Delivery person
- **1. Administrator**: This is the person who manages all the orders and send the order information to respective homemakers and see that the food is being delivered on time.
- **2. Customer:** They are nothing but public. They place the order and the administrator will get the information then the delivery person will deliver the food.
- **3. Homemakers:** They are the ones who prepare healthy homemade food according to the placed orders.
- **4. Delivery Person:** This person delivers the food prepared by homemakers to respective customer.

Customer has to place the order at least 5 to 6 hours before the delivery time so that the administrators can inform the homemakers and get the food prepared by the delivery time. They'll have a good variety of homemade food to choose from the menu.

Menu:

- Vegetarian food
- Non-Vegetarian food

After choosing the dishes customer has to enter his/her details which will go to administrator.

Administrator can access and search all the records of previous orders and other admins. He can also manage the records by adding and deleting them.

Once the ordering is completed by the customer they'll get the bill which can be either be paid online or in cash.

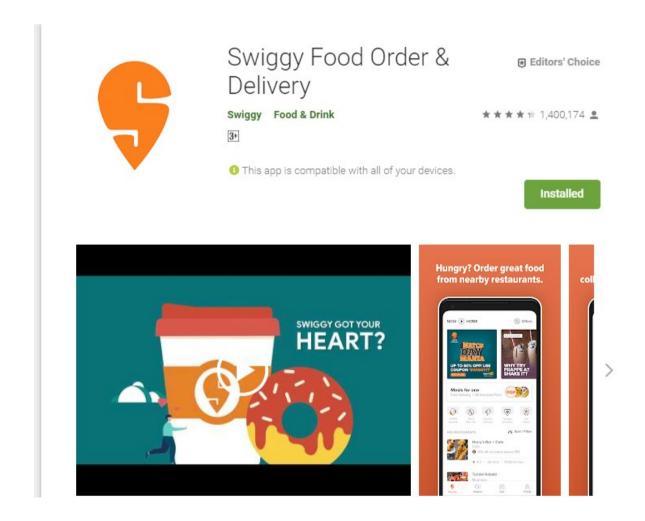

## **INTRODUCTION**

#### **2A. PROBLEM STATEMENT:**

Consuming more fast food causes major health issues in long term and reduces the life span of people. To overcome this, homemade food delivering app is designed. In which good, tasty and healthy food cooked by homemakers will be delivered to customers.

Administrators' information, customers' information and the food they wish to order also the bill generation, managing of all these information will be covered in this project.

### 2B. STATE OF ART WORK:

Installed

Enjoy Zo

Using Swiggy, you can order food & beverages online from restaurants near & around you. They deliver food from your neighborhood local joints, your favorite cafes, luxurious & elite restaurants in your area, and also from chains likeDominos, KFC, Burger King, Pizza Hut, FreshMenu, McDonald's, Subway, Faasos, Cafe Coffee Day, Taco Bell, and more.

Zomato and other food delivering apps also works in similar manner.

Our app is purely based on delivering homemade food which is different from these apps.

### **SRS**:

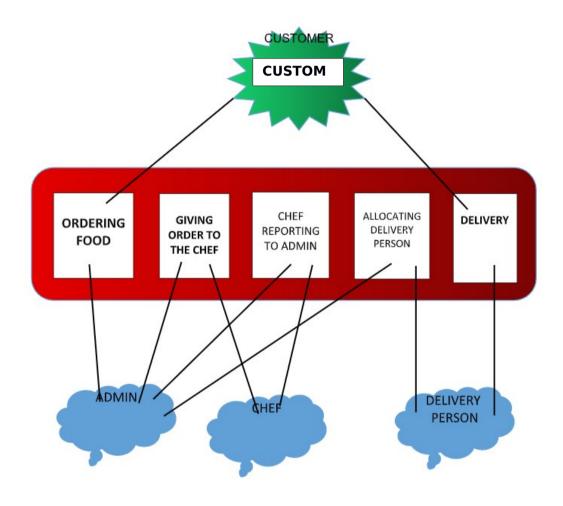

The programming language used is:C language

## Concepts involved in the project:

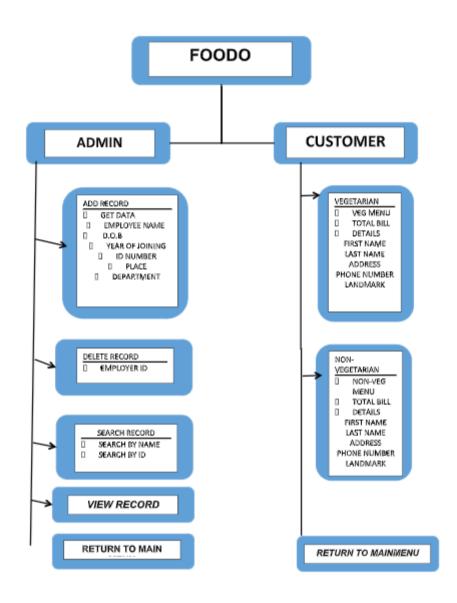

- File Handling
- Switch case

## **CONCLUSION AND FUTURE SCOPE**

We have tried to implement a homemade food delivering system using C language. This is just system implementation where interaction takes place on a console.

Further this can be developed into an app using Android studio and other programming languages and brought into market where it'll have a lot of scope as it delivers healthy and tasty food to its customers.

This app will be a combination of variety of tasty food which will be healthy as well, even the prices will be affordable as it is homemade!
